THE BEST RODENTICIDE FOR USE IN OUTDOOR SETTINGS SUCH AS IN BURROWS AND OPEN AREAS?

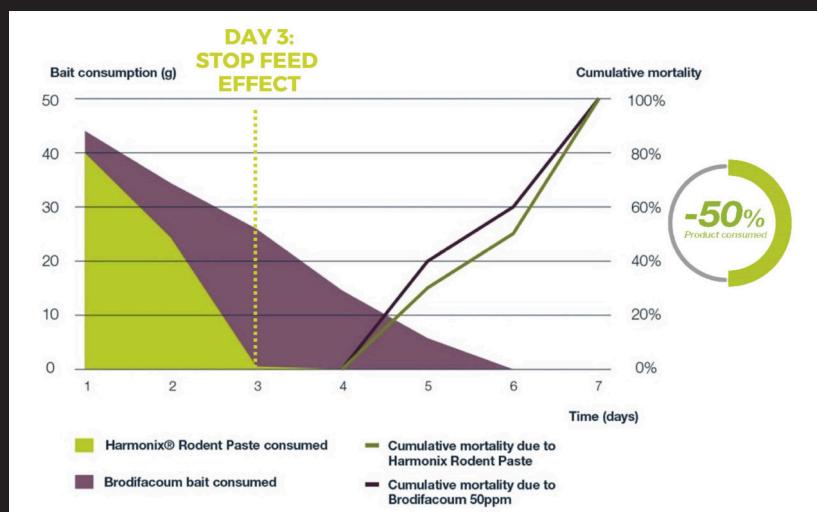

Lodi's Gems Harmonix® Rodent Paste is the result of years of innovation leading to the development of a completely new solution, based on the active substance cholecalciferol. Available in an optimised bait matrix and in modern, sustainable packaging.

As a new edition to Lodi's Gems range, Harmonix® Rodent Paste is a highly effective ready-to-use non-anticoagulant rodenticide for the control of rodents. It provides farmers with an innovative and flexible solution to rodent problems which untreated can lead to disease, property damage, fire risk, and costly repairs.

The introduction of Harmonix has no known resistance and is proven to be twice as effective as anticoagulants using half the bait and working in as little as 7 days.

Key innovations Lodi's Gems Harmonix® Rodent Paste:

- Open areas and burrows use on the label
- Proven to be twice as effective as anticoagulants working in as little as 7 days using half the bait

- Stop feed effect occurs after 2-3 days reducing rodent activity and appetite
- No resistance build up
- Reduced risk to non-target species as the active is non-bioaccumulative and non-persistent in the environment
